Upgrades in Hackman Cooking equipment

The New generation of Chef Convection, Roasting-Baking Ovens and Proofing Cabinets

The reliable and very popular Chef ovens have been upgraded to better meet the demands of the market. The Chef line is now more reliable, easier to maintain and use. The most important new features:

- the door structure is more robust and reliable;
- rounded corners inside of convection oven – better cooking result;
- water drain – as the customers have requested for easier cleaning;
- better lighting – Halogen lights
- more effective heating insulation which makes Chef more environmental friendly because of less energy consumption.

Kerava factory in record speed

The tremendous growth of incoming orders during the past winter and spring has not gone unnoticed at the factory. The Hackman Kerava factory has responded to the increased demand by adding capacity, with the result that the factory broke its all time monthly production output record in May 2008, beating the previous record from 2003. However, this record was short-lived, as it was broken again in June.

As the demand keeps growing, more actions to increase the production capacity will follow after the summer holiday season. This means we are looking forward to moving these records to history very soon.

Big thanks for these records go to you, our customers, for creating the demand. Keep the orders coming so we can keep breaking old records!
